Journal 4

The creation of the screen prototype is crucial to the development of the overall visual appearance and idea of the game. In the beginning, I created some sketches that showed me the possibilities of how the screen should look like and what kind of information could be provided to the player via this screen. The first design consisted of the big central part I had tagged “Game Here” and the leaderboard above it along with the QR code on the side of the screen to give an indication of where it will be placed.

While working on the prototype further, I also considered yet another type of layout where there would be a game field similar to a maze. There, I placed the leaderboard in the top right corner, giving more room to the maze which occupies the most of the screen. It allowed me to see how the game environment will look on a bigger screen. I had a much difficult time figuring out what

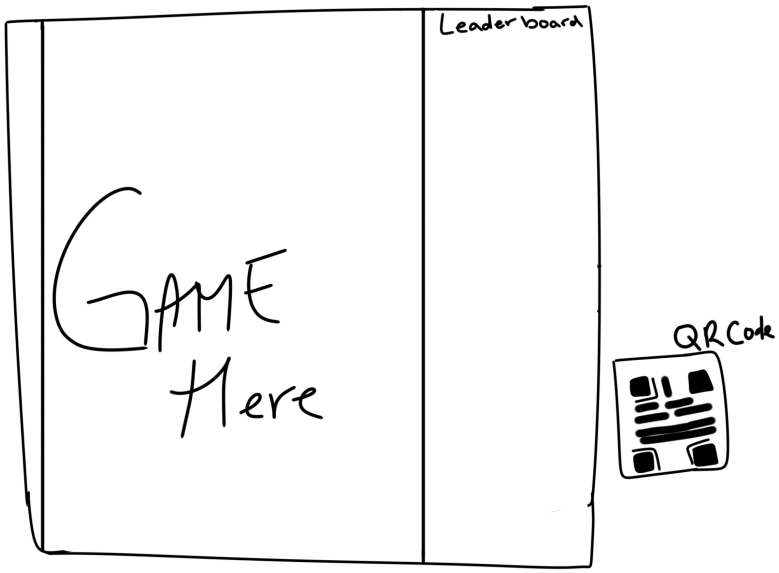

the screen layout should be, should it be just one big square display where the maze and mosaic is shown or having it in sections.

As for the Big Soccer screen layout, I didn't go too far off or deviant and kept it similar to the tower jenga one but with the leaderboard possibly in the way, I had placed the leadership board on the top of it like how it is on sports tv.

One of the main things I learned from this process was the importance of planning the user interface before beginning the actual implementation. By sketching the ideas first, I could experiment with different arrangements and identify which elements needed the most space. I also considered how players would interact with the display and how the leaderboard and QR code could support the overall experience.

Making three different prototypes helped me figure out what the layout would possibly be like and that it is very easy to build upon or change as it is before it actually gets constructed in a hypothetical sense. As before the reading week, we each tasked ourselves to do prototypes for different components, as two would do prototypes for the games, one would do the controller layout and two would do the screen layout.
